Fulfilling family desires

Fertility Center

Causes of infertility often involve ovulation disorders, fallopian tube blockage and uterine or cervical abnormalities as well as quantity and quality of sperms. Raising the hope for having babies at Fertility Center, fertility treatments, e.g. IUI, IVF and ICSI are conducted by highly experienced reproductive specialists and embryologists.

Over 15 years of expertise, delivered **1,200+** babies into the world*

Egg and sperm freezing to preserve a couple's fertility for the future

Success rates of IVF/ICSI are up to

70%

Embryo lab and technology adhering to standards

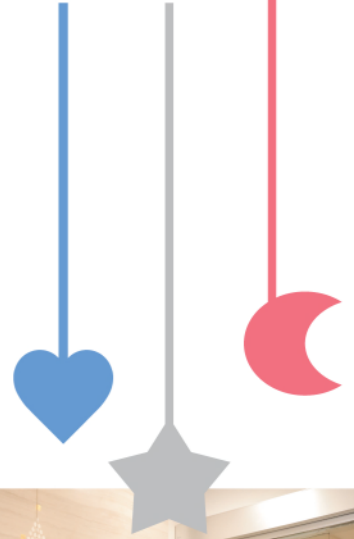

Genetic advances using Preimplantation Genetic Testing (PGT) to increase the chance of pregnancy while lowering the risk of miscarriage

* Information as of 2023.

Ensuring mother & baby health

Women's Health Center

Stay relaxed throughout the antenatal care journey under a close supervision of the team of obstetricians-gynecologists. In women defined as high-risk pregnancy, e.g. maternal age over 35, multiple pregnancy, certain underlying conditions and pregnancy history of preterm delivery or eclampsia, comprehensive care needs to be conducted by **maternal-fetal medicine (MFM)** specialists to oversee and manage all possible complications that might happen, ensuring a successful and safe delivery.

Non-Invasive Prenatal Testing (NIPT)

to screen for genetic disorders using maternal blood during gestation age of 10th - 20th week to best guide fetus's health.

Screening for preeclampsia and preterm birth

to reduce the risks of complications, enabling an appropriate treatment planning.

Quality Pregnancy Program

to provide advices for a healthy pregnancy during early and late pregnancy, safe childbirth and postnatal recovery.

Lactation instruction

and breastfeeding care by lactation nurses at Lactation Clinic.

Women presenting with certain gynecologic issues that interfere with pregnancy, e.g. ovarian cyst, endometriosis, chocolate cyst and pelvic adhesion can be successfully treated with **minimally invasive surgery, e.g. laparoscopic and robotic-assisted surgeries** performed by obstetricians-gynecologists and multidisciplinary team.

Robot-Assisted System For Minimally Invasive Gynecologic Surgery

The da Vinci Xi is an advanced robotic surgical system using specialized technology that enhances surgical precision with highly satisfactory outcomes. Advantages include

- Better access to hard-to-reach areas
- Improved visualization with sophisticated camera
- More precise surgery and enhanced safety with less complications
- Faster recovery and quick return to daily life

The da Vinci Xi has been applied to the surgical treatment of gynecological diseases, such as

- Uterine fibroid
- Endometriosis
- Uterine cancer
- Benign ovarian tumor and ovarian cancer
- Pelvic organ prolapse

Delivery and Maternity Ward

Delivery and postpartum care are performed by obstetricians-gynecologists and MFM specialists

- **Elite Maternity and Exclusive Care Package :** A 7-night program in Suite room for 360° care by lactation nurse, nutritionist, physical therapist, dermatologist and mental health specialist.
- **Maternity ward** closely advised by maternity and lactation nurses.
- **Expanded Newborn Screening** covering 40 inherited metabolic disorders, allowing for accurate diagnosis and timely treatment to minimize chances of disability and death in the baby.

Full services in labor and delivery room with medical advances

- Labor and delivery room is fully equipped with advanced medical devices adhering to international standards.
- Adjustable delivery bed Relaxing and comfortable environment.
- Closely supervised by professional nurses specialized in labor and delivery.

Feeling at ease and comfortable for the mother and the baby in maternity ward

- Modernized in-patient rooms are newly renovated with high degree of privacy.
- Feeling like resting at home with a variety of room options.
- Several food choices to serve the family.
- In-ward services and advices from the nurses 24/7.

Neonatal Intensive Care Unit (NICU)

Newborn's critical conditions require a special care in NICU are, for example :

- ♥ Preterm babies
- ♥ Babies with congenital disability
- ♥ Babies with a wide range of abnormalities, e.g. respiratory, cardiovascular, gastrointestinal and neurological systems as well as infections and low blood sugar levels.

Round-the-clock care conducted by neonatologists and specialized pediatricians

Our pediatricians work closely with the team of obstetricians-gynecologists, enabling an appropriate preparation prior to and after delivery.

- ♥ In case of newborn's critical conditions requiring a special care in Neonatal Intensive Care Unit (NICU), round-the-clock care is given by neonatologists and nurses specialized in neonatal care, ensuring safe and effective treatments.
- ♥ Equipment and devices in NICU, e.g.
 - Advanced neonatal ventilator
 - Nitric oxide delivery machine
 - Hybrid infant incubator
 - Blue light phototherapy lamp

Staying worry free

with comprehensive **pediatric care**

Ensuring child's health with pediatrician team covering all subspecialties

Pediatric Ward

Creating a sense of home for your child at pediatric ward

Comprehensive pediatric care provided by pediatric specialists, nurses and health professionals
